

Instruction Manual
TABLE SET
ENGLISH

Passion for food, premium design and the love for spending time outdoors with family and friends is what brought Quan alive. Now we would like to invite you to enjoy it too.

Thank you for purchasing Quan Garden Art Table Set. Please read this instruction manual before first use.

Installation

Your Quan table should be positioned on a hard, stable and level surface. Because of its weight, the table may become unstable when placed on soft or uneven ground. Ensure a safe distance from any flammable or heat-sensitive materials. Top Plate of the fireplace is covered with vegetable oil at Quan factory. Before first use clean it with soft cloth and apply fresh layer of cooking oil (vegetable or olive oil). If your Quan table and chair bases are made of Corten steel (rusty look) they may stain your floor and dirty your clothes for the first 3 months after purchase. It is a natural characteristic of the material. Protect your floor with foil. Armchairs are equipped with plastic feet, which protect your terrace floor and your armchairs from damage during use. If any of the feet gets damaged it should be replaced immediately. Granite table top is fixed to the metal base with 4 screws. These screws should be left loosely fastened to allow individual thermal shrinkage of granite top and metal base - never fasten them tightly or your granite top may crack.

First use of fireplace

1. Apply fresh layer of cooking oil over Top Plate,
2. Start with a small fire,
3. Gradually add more wood to allow Top Plate to slowly gain temperature,
4. Allow to burn for 1 hour and let cool down completely,
5. Repeat the above procedure at least once.

Do not use chemical lighter fluid, petrol, oil etc. to start fire. Remember that burning wood should never get directly underneath Top Plate – it should be kept within boundaries of the cutout. Using more wood may overheat and irreversibly damage parts of your fireplace. Never put out fire by pouring water into your fireplace.

Regular maintenance

Your Quan Table Set requires little maintenance and can be kept outdoors most of the time. Top Plate should be cleaned and oiled to prevent corrosion. When hot, Top Plate can be easily cleaned with a little water (deglazing). Any corrosion on Top Plate should be gently cleaned off with sanding paper or grinder and the surface covered with cooking oil. Use Raincover when it's raining or when not using your fireplace for longer periods. For winter storage cover Top Plate with vaseline or lard. Use only seasoned hardwood. Granite top should be treated with granite impregnator once a year. Armchairs seats are made of high quality African hardwood. Once a year - before rainy season - they should be gently sanded (matted) with sanding paper and covered with impregnating wood oil. Pillows should be kept dry.

Quan is a result of a long engineering process and many tests. Our goal was not only to make it look like a piece of art, but also to make it very functional. We developed it together with our Quan Chefs, through carefully listening to all their opinions and suggestions.

Top plate is made of 6mm tempered carbon steel. This type of material prevents the change of shape while being exposed to high temperature. Depending on the weather conditions and the kind of wood used for burning, the top plate can reach temperature over 400°C in the center area. The outer area remains slightly cooler which is perfect to control the speed of cooking

Inner bowl is made of stainless steel and can be removed for cleaning. This means that whatever gets burned in the fireplace, you can always give Quan its original, shiny clean looks

Outer bowl helps to protect you and your loved ones from instant burns, however caution is always advised

Table top is made of granite. It is a natural, durable stone. It is very hard, however it can be susceptible to sudden mechanical shocks. It should be fastened loosely to the base to allow individual thermal shrinkage

The base guarantees stability and serves as wood storage for your Quan fireplace

Armchairs seats are made of high quality African hardwood. Once a year - before rainy season - they should be gently sanded (matted) with sanding paper and covered with impregnating wood oil. Pillows should be kept dry

If your Quan table and chair bases are made of Corten steel (rusty look) they may stain your floor and dirty your clothes for the first 3 months after purchase. It is a natural characteristic of the material. Protect your floor with foil. Should any of the plastic protective feet gets damaged it should be replaced immediately.
